1939 PRICE LIST

EXHIBITION DAHLIA ROOTS

Abbreviations following the names of varieties listed herein are to indicate the type of bloom, or classification. (FD) Formal decorative, (ID) Informal decorative, (SC) Semi-Cactus, (C) Cactus, including incurve, re-curve and straight cactus.

(GUARANTEE) Replacement without charge of any stock supplied by us, that does not prove true to name, or does not grow within three weeks after having been properly handled and planted.

(PLANTING) Have the ground well worked, plant six inches deep, (not on end) and cover with soil not over one or two inches, as the plant grows the soil can be worked in the hole around it.

Do not use high powered fertilizer or manure in the hole when planting, if the soil is of poor quality, a garden trowel full of bone meal worked well into the soil will do no harm, and as it is slow acting the results will be better seen at blooming time, all other fertilizers should be used on the surface while the plant is growing, keeping about eight or ten inches away from the plant, cultivate about once a week, when plants are half grown deep cultivation should stop and the surface only scratched as you are liable to injure the feed roots.

(INSECTS) When the lower leaves on the plant turn brown, many dahlia fanciers think it is caused by the heat or dry spell, while the real cause is insects, spray your plants once a week while they are growing and you will avoid this trouble and keep your plants growing in a healthy condition; we find either (EVERGREEN) or (RED ARROW) used as directed will control the insects and is equal to fertilizer in promoting good growth.

We prepay all express or mail orders. It would be well to place your order as early as possible, as many varieties are limited, a small deposit will secure your order, balance at shipping time.

Visitors are always welcome, we enjoy and appreciate your visits.

WILLIAM H. SHINNAMON
